

History
Pre-, peri- and post- natal history
Onset and progression
Associated pain
Delayed development
Regression of development
Trauma
Seizure
Strenuous exercise
Headache / vomiting
Bowel/bladder function
Wound
Tick / Toxin ingestion
Medications
Fever, systemic upset / flu-like illness
Rash
Neck / back pain
Family history
Psychosocial stressors

Examination
Fever, systemic wellness
Respiratory status / Speech / feeding
Muscle inspection <ul style="list-style-type: none"> - Atrophy/hypertrophy (including tongue) - Tenderness - Fasciculations - Contraction with percussion (myotonia)
Muscle tone
Muscle power <ul style="list-style-type: none"> - Proximal / Distal - Manual muscle testing - CMAS
Neurological exam <ul style="list-style-type: none"> - Gait - Reflexes – upper motor neuron vs lower - Cranial nerves - Sensation - Rectal tone
Developmental assessment
Spine
Wound / tick
Rash
Nail fold capillaries
Calcinosis
Lipodystrophy
Lymphadenopathy
Hepatosplenomegaly
Joint range of movement
Arthritis
